Z-Fold Paper Towels (white) (Case 3000)

Maintenance Tip: If you have installed pour-in soap dispensers and are using these for Alcohol hand sanitiser it is important to following this maintenance advice. Make sure that the dispensers are not placed near a heat source, such as a radiator or in direct sunlight. The can result in the alcohol evaporating leaving the thickening agent to congeal and block the push mechanism in your dispenser. It is wise to regularly clean the dispenser (reservoir and push mechanism) with warm soapy water to prevent blocking and avoid contamination.
